Faculty can review data from any assessment they used or an Assessment in the Assessment Library using the **Results Explorer**. Library assessments used by more than one section will hold the aggregated results for all sections.

To review the results of an assessment during the scoring process, select the **Actions menu** in the upper right corner of the Rubric or Scorecard view and choose **Results Explorer**.

To review the results of an assessment in the Library, go to the **SLOs & Assessments** section and the **Assessments** tab. Use the SLO filters to find the assessment and click on the Assessment Results icon.

To view the results of any assessment you have ever used, click on the **Results Explorer** section. Use the SLO filters to find the assessment and click on the row in the table with the assessment.

The Results Explorer dashboard allows users to explore the results for a single assessment over time, by percent or count, and in comparison with one or more of the SLOs and/or criterion assessed. If more than one section has used the assessment, the Results Explorer will hold the aggregated results for all sections.

The Results Explorer offers two views, Chart View and Table View.

The Chart View allows the evaluator to see their section versus the aggregate scores for all sections using the assessment.

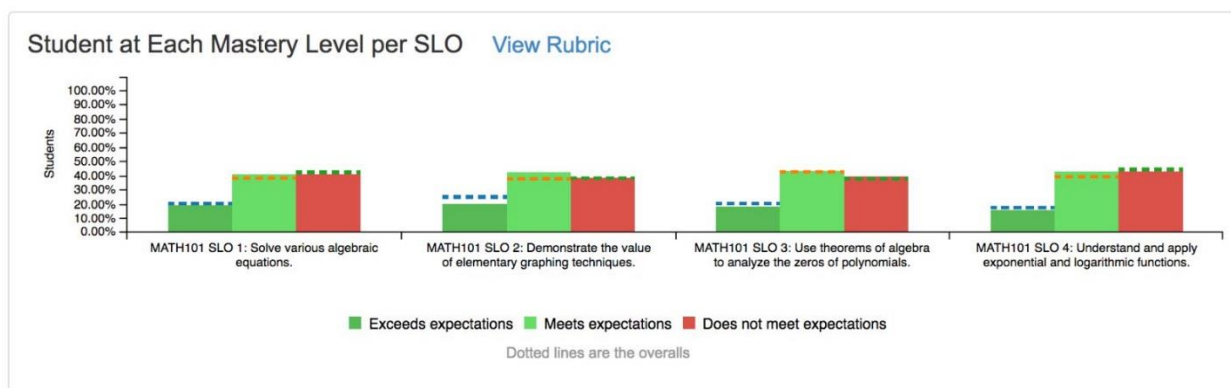

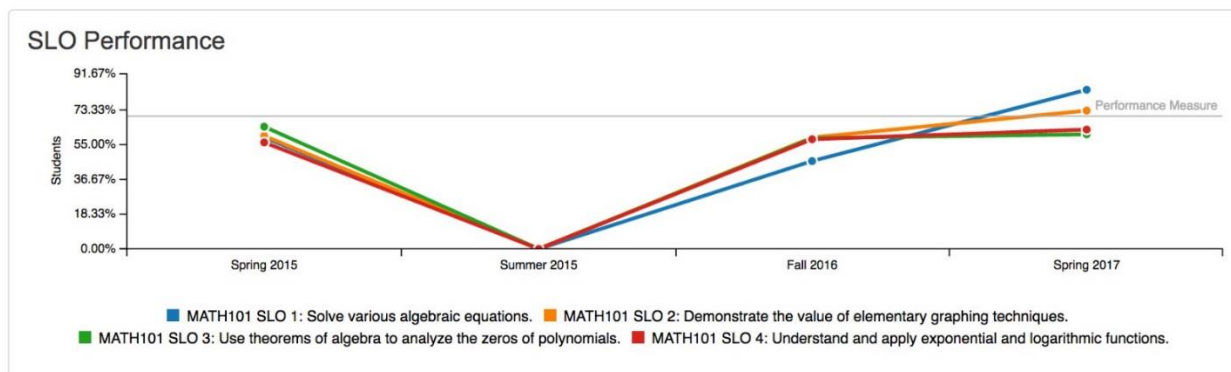

Table View presents the same information as the Chart View, but in table form. Table View also shows the results of any Assessment Reflections.

To print the graphs and tables using the current filters and options, select the print icon in the upper right corner of the screen.
